# Remote Workstation Solutions

In an ever changing world, industry professionals are becoming more dynamic. Project teams are greatly dispersed, security risks are on the rise, datasets are constantly growing, and heavy NVIDIA® RTX® GPU accelerated software applications are fast becoming the norm—demanding more and more compute power at the desk.

In contrast, companies need the ease and flexibility of working remotely. By harnessing the power of NVIDIA RTX GPUs and HP Anyware cloud-accessible remote software, BOXX Remote Workstations deliver the highest performing, lowest latency, and most scalable remote workstation experience, allowing companies access to their powerful workstation investments anytime, anywhere.

FLEXX

Onsite or via BOXX Cloud

Remote Workstation Solutions
Access. Create. Collaborate. At any time, from anywhere.

Sender

Optimized for the Highest Level of Graphics Performance
Leverage NVIDIA optimizations for capturing pixels, encoding, and decoding.

NVIDIA Dedicated Processing
HP Anyware doesn't impact graphical software apps running on the workstation and NVIDIA GPUs have their own h.264 encoder/decoder, removing any additional CPU or GPU workloads.

Supports Physical & Virtual Workstations
NVIDIA vGPU software enables the GPU to be virtualized across multiple virtual machines.

Multiple OS Platform Supported
BOXX and HP Anyware Remote Workstation software support both Microsoft and Linux operating systems.

Utilize Turn-key Cloud Service
BOXX Cloud lowers your IT burden with hosted cloud workstations equivalent to our sender hardware.

FLEXX S2G, S1G, P2G
- Intel® Core™ i7/i9 or AMD EPYC™ 7000
- Minimum 16GB RAM
- NVMe SSD storage
- Microsoft Windows or Linux OS

RAXX T3, P3, W3, P1G, P2G
- Intel® Xeon®, Intel® Core™ or AMD EPYC™ 7000, Threadripper™ Pro
- Minimum 32GB RAM
- NVMe SSD storage
- Microsoft Windows or Linux OS

BOXX CLOUD
- Turn-key subscription cloud service
- Bare metal workstation-level performance
- Hosted by BOXX sender hardware
- Decreases your IT burden

Receiver

Bring Your Own Device

Hardware Decoding
HP Anyware Remote Workstation uses hardware decoding and can leverage the power of NVIDIA GPUs.

Best User Experience
Ultimate user experience for large multi-monitor/ desktop configurations and project workflows.

USB Device Support
Continue to use Wacom tablets, 3DConnexion devices, and more, with direct USB pass-through.

Multiple OS Platform Support
Support for Windows, Linux, or other client operating systems.
